## High-speed Connectivity

Iconnyx has the technical expertise to provide advanced, high-speed and bespoke connectivity solutions, including private networks and virtual private networks to connect multiple sites. Our solutions enable you to provide a private network for home-workers, smaller remote offices, large remote offices, and even to your partners, suppliers and customers where required.

“ Point-to-Point  
Circuits that can  
guarantee the  
bandwidth and  
quality of your  
voice, data and  
video traffic...”

### Bespoke solutions

With a large team of network and technical support engineers, as well as PRINCE2 qualified project managers and provisioning staff, Iconnyx offers complete, end-to-end solutions. In addition, we tailor each service level agreement (SLA) to meet your specific business requirements.

#### Our bespoke solutions can include the following:

- Point-to-Point Circuits
- Wide Area Networks (WANs)
- MPLS VPNs

#### IP VPN Services

Whether you need DSL lines, leased lines or Ethernet connectivity, Iconnyx can provide you with the right level of bandwidth and security for your requirements. Having invested heavily in the MPLS-based network, we can offer solutions that are reliable, high-speed and secure. With an IP VPN-based service, you can route traffic using highly secure ‘tunnelling’, enabling an economical alternative to building a dedicated private network.

#### Key features & benefits

- Secure, high-performance, flexible and cost-effective private network
- Internet access available via a firewall
- Choice of bandwidth options to meet your changing network needs
- Multiple access options
- Bespoke service with multiple service options
- Helpful and professional 24/7 helpdesk and monitoring

#### Point-to-Point Circuits

Iconnyx offers Point-to-Point Circuits that can guarantee the bandwidth and quality of your voice, data and video traffic. This solution is ideal for organisations who need exclusive, mission-critical communications between two or more locations – having found that standard Internet connectivity fails to meet their needs.

Our Point-to-Point circuits will connect your sites cost-effectively, allowing you to benefit from reliable, redundant and secure connectivity. With speeds from 2Mbps to over 1000Mbps, over large distances and always-on connectivity. Installation is quick and easy, thanks to the expertise of our engineers.

#### Wide Area Networks

Iconnyx provides complete Wide Area Network (WAN) solutions that can include high-speed connectivity and managed hosting, ensuring all your users can enjoy instant access to company resources – whether they are based on-site, at home, on the road or based at remote offices.

We understand that your network is mission-critical so our solutions offer reliability, speed of access and stability. Using our own portfolio of services from Tier 1 providers and leading partners, we are able to create an end-to-end network solution to meet your objectives, backed by exceptional account management and support.
