

As a virtual network operator with Tier 1 partnerships and points of presence across the UK, Iconnyx can provide enterprise-class Internet Access – from straightforward out-of-the-box solutions through to bespoke connectivity. In addition, we tailor each service level agreement (SLA) to meet your specific business requirements.

We offer the following Internet Access services:

- Iconnyx ADSL
- Iconnyx SDSL
- Iconnyx Leased Line & Ethernet Connectivity

“ Iconnyx SDSL provides your team with voice-quality, business -grade access without port blocking or proxy servers...”

Iconnyx Leased Line & Ethernet Connectivity

Leased lines from Iconnyx provide you with dedicated, guaranteed bandwidth – it's the ultimate in Internet connectivity and the most cost-effective option for heavy users. A leased line also lets you connect separate office locations, so colleagues can share resources at LAN-like speeds.

With higher network/Internet speeds available, your employees can become more effective and productive. With two locations connected, your teams can share data and applications. A leased line also means you could take advantage of money-saving voice-over-IP phone calls (VoIP) between your sites.

Iconnyx can quote for leased lines from 2Mb/s to 34Mb/s and beyond. We can even quote for permanent Internet access elsewhere in the world, using International fibre networks.

We also offer high bandwidth Ethernet from 10Mbps to over 1Gbps for both Internet access and site-to-site connectivity.

As an independent company, Iconnyx can source the physical leased line connection from the most cost effective supplier based on your bandwidth requirements and location. This means that we can provide competitive quotations regardless of your location in the UK. By partnering with multiple telecommunications companies, we have direct access to over 100 points of presence. These points of presence are connected to the Iconnyx network via high capacity interconnects.

Leased Line prices

Please contact Iconnyx for a bespoke quotation.

Key features & benefits:

- Dedicated bandwidth for you
- Leased line speeds of 2Mb/s to 34Mb/s and beyond
- High bandwidth Ethernet from 10Mbps to over 1Gbps
- Predictable high levels of service with vastly reduced latency
- 99.9% uptime or your money back for that period
- Managed router with all leased lines
- Excellent service with 24/7 monitoring by our central network management systems
- Fixed charges regardless of usage, allowing accurate budgeting

Enterprise-class DSL Internet Access Solutions

Iconnyx ADSL

With broadband speeds of up to 8mb/s, Iconnyx ADSL gives you high-quality, always-on connectivity for one or more business computers. Your service will be provisioned quickly so you can avoid waiting around for weeks for news about your connection. The hardware we supply is quick and easy to install too – just plug and play.

Iconnyx ADSL lets you enjoy increased productivity and improved efficiency through faster upstream speeds and real-time email retrieval. With a fixed price, it's easier to plan your budget. You can also transfer from your existing provider to Iconnyx for free.

Key features & benefits:

- Up to 500/1000/2000/ 8000Kb/s download speeds*
- Up to 800Kb/s upload speed
- Minimum downstream throughput 40% of rated bandwidth (up to 2000Kb/s)*
- Rate adaptive service for increased reliability (MAX service only)
- Minimum downstream throughput 1200K of rated bandwidth for MAX service*
- Unlimited email addresses
- Reverse DNS entries
- 8 Static IP addresses (5 useable)
- SMTP access for any domain name
- High quality news group access*
- No port blocking
- No proxy servers
- Service guarantees available
- Fully redundant network, with multiple PoP's and peering points
- Dedicated account management
- Dedicated technical support
- Installation is typically within 5-10 working days*

*See conditions published on our web site ADSL service page.

Iconnyx SDSL

Is standard ADSL restricting your business performance? If so, SDSL could be the answer. With low contention rates and identical uploading/downloading speeds, Iconnyx SDSL is the ideal mid-point between ADSL and a Leased Line. The service is also especially useful if you have home-workers needing faster upload speeds, or you host a server on site (such as a Virtual Private Network or Terminal Server).

Iconnyx SDSL provides your team with voice-quality, business -grade access without port blocking or proxy servers. The speed of service can improve your efficiency and productivity. Meanwhile, the matched upload/download speeds benefit homeworkers, as well as enhancing the speed of file transfers and the quality of video streaming and video-conferencing.

Key features & benefits:

- Maximum contention ratio 10:1
- Upload speeds of up to 512 / 1024 / 2048 Kb/s
- Download speeds up to 512 / 1024 / 2048 Kb/s
- Enhanced Care - one working day repair guarantee
- Multiple static IP addresses
- Dedicated, engineer installed connection
- Unlimited usage, no data transfer limit
- Voice-ready MPLS network
- No port blocking
- Very high availability
- A BT Engineer will visit to install dedicated cabling for SDSL
- Lead time is 15 working days
